

M20 Pix

The Photo Engraving Solution

A picture speaks a thousand words. From paintings to photography. From black and white to the colour revolution. Images have always been a fascination of mankind, capturing, reproducing and preserving memories of special occasions and memorable events. This process has now been revolutionized with one small machine.

Gravograph has designed the ultimate personalization tool through the creation of the M20 Pix. The engraving possibilities are endless.

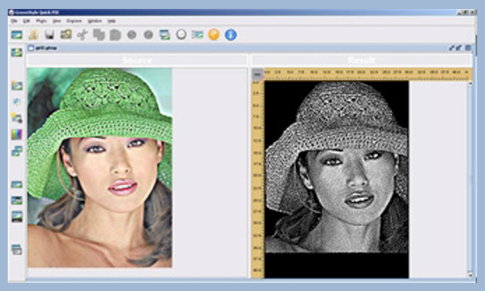

A SINGLE SOLUTION FOR MULTIPLE NEEDS

The **M20 Pix** is designed to engrave your images ***and*** high-quality, continuous line text and logos in the same print job. A single solution for multiple needs.

Engraving a medal, plaque, or key chain is now possible with the **integrated self-centring vice.** A laser spotting beam can be used to define the engraving area on unusual shaped engravable items, virtually eliminating errors.

The M20 Pix can even engrave on non-flat surfaces! The engraving depth can be adjusted to accommodate any material, whilst the diamond marking ensures a long-lasting engraved design that will not wear off over time.

GUESS-FREE SOFTWARE

The M20 Pix technology opens up a multitude of engraving possibilities. **Gravostyle QuickPix software** is what makes this machine outstanding. The software boasts a full range of features and functions that are easy-to-use and designed to cater for specific professional needs. Dedicated Pix interface, advanced text tools and a photo filter are just the beginning.

Pix-specific software makes **importing an image quick and easy**. It works for you by calculating the dots to engrave and **doing all the guess-work for you**. All you have to do is admire the final result: a high-quality memento, engraved in no time at all!

CAPITALISE ON YOUR WORKSPACE

The proof is in the footprint. The compact M20 Pix will **fit anywhere**, even in limited workspaces. All you need is one square foot of space and a computer or laptop.

User-friendly for everyone. A few minutes is all it takes to become familiar with the technology and achieve a high-quality and elegant engraved result.

Ready to use. A complete photo engraving solution is always at your fingertips. All the options you need are already integrated into the M20 Pix.

Stand out above the rest

The M20 Pix has captured the interest of professional engravers from around the world with its unique ability to engrave an image and continuous line text, resulting in a truly elegant, high-quality gift. High-precision, long-lasting diamond engraving on flat and non-flat surfaces, plus intelligent software that does the guess-work for you: just a couple of features that make the M20 stand out above the rest.
